AN ENVIRONMENTAL SURVEY OF DIALYSIS PRACTICE IN AUSTRALIA AND NEW ZEALAND

The Green Nephrology Action Team (GNAT) of the ANZSN and RSA, in conjunction with The George Institute for Global Health and the University of New South Wales (UNSW), is conducting a survey examining environmental practice across dialysis units in Australia and New Zealand.

The survey provides an important opportunity to establish a baseline for environmental sustainability in kidney healthcare in ANZ, and from there, to improve the environmental profile of the care that we deliver.

There was unanimous support for conducting the survey from attendees at DNT this year and there is also international interest in replicating the survey in other countries.

A link to the survey will be sent to all Heads of Units for them to distribute to relevant people in each of their dialysis facilities. Please help us by completing it!

If you have any queries re the survey please contact GNAT – RSA representatives Anthea White and Jason Wei.
